

Vinh Luu

Forward Deployed Engineer - Enterprise AI Agents, Integrations, Production Systems

Ho Chi Minh City, Vietnam | vinhluu.se@gmail.com | +84 795 795 595 | [linkedin.com/in/vinhluulinked](https://www.linkedin.com/in/vinhluulinked)

PROFESSIONAL SUMMARY

Forward-deployed, solutions-oriented engineer with 5+ years building production systems for Zalo, Vietnam's largest messaging platform with 30M+ users. Strong match for enterprise AI agent deployment roles requiring customer discovery, system design, API integration, production debugging, observability, evals, guardrails, and measurable business outcomes. Proven ability to translate ambiguous stakeholder workflows into reliable software across partner, Finance, Sales, Ops, Product, and Engineering teams.

Keywords: Forward Deployed Engineer, Solutions Engineer, Solution Architect, enterprise AI agents, customer discovery, technical workshops, system design, backend engineering, API integration, tool calling, RAG, evals, guardrails, observability, production support, stakeholder management, APAC, Vietnam.

CORE SCOPE FIT

- Customer workflow to production:** Run discovery, decompose ambiguous requirements, design deployment architecture, and own implementation through launch.
- Enterprise AI deployment:** Build practical LLM workflows with structured outputs, tool/function calling, eval loops, human review gates, guardrails, and escalation paths.
- Integration and reliability:** Connect APIs, messaging systems, data pipelines, auth-constrained services, and legacy partner systems with observability and rollback discipline.
- Business outcome ownership:** Tie engineering decisions to onboarding speed, operational overhead, reliability, compliance, customer trust, and measurable adoption.

WORK EXPERIENCE

Zalo, VNG - Vietnam's largest messaging platform, 30M+ users Mar 2021 - Present

Lead Software Engineer - Solutions Architect Jul 2025 - Present

- Owned enterprise solutioning** for JobMarket and HealthTech verticals by running partner discovery, scoping integrations, aligning stakeholders, and converting open-ended workflows into production architectures.
- Reduced operational overhead by 30%** by delivering a SOX-compliant financial reporting and billing workflow across Finance, Sales, Ops, Product, and Engineering, with auditable controls and clear ownership boundaries.
- Introduced applied AI workflows** for classification, content-quality signals, and draft generation using structured outputs, eval loops, and human-in-the-loop guardrails for production usage.
- Reduced partner onboarding time by 40%** by building integration prototypes, partner blueprints, technical documentation, and reusable delivery patterns that improved feedback loops into Product and Engineering.
- Led a team of 4 engineers**, promoted 2 to senior, and standardized AI-assisted delivery practices for spec drafting, prototyping, debugging, and code review while preserving senior review on high-risk changes.

Senior Software Engineer - Technical Liaison Jul 2023 - Jul 2025

- Architected and deployed** business messaging delivery systems behind millions of daily business-to-user messages, supporting sub-second latency and hundreds of enterprise partner integrations.
- Acted as embedded technical partner** for external enterprises adopting the ecosystem by leading API design discussions, integration workshops, live troubleshooting, and performance tuning across legacy and modern stacks.
- Improved peak-traffic stability** across 5+ core ecosystem applications through observability, back-pressure, graceful degradation, and performance tuning under production load.

Software Engineer Apr 2022 - Jul 2023

- Increased permission-control coverage by 50%** on Zalo Business Message by leading message-quality and trust/safety guardrail work on a 30M+ user communication surface.
- Improved resource efficiency by 25%** by migrating legacy services to microservices without user-visible downtime.

Associate Software Engineer Mar 2021 - Apr 2022

- Improved business workflow performance by 15%** by converting raw user and business requirements into services and latency-focused redesigns using Redis, Kafka, SQL, and NoSQL systems.

FPT Software	Sep 2019 - Aug 2020
Software Engineer - Intern/Contract	Sep 2019 - Aug 2020
• Built automated ETL pipelines that consolidated disparate data sources into business intelligence for internal and partner-facing analytics. • Authored third-party integration guides for partner portals, reducing onboarding friction for external engineering teams.	
TECHNICAL SKILLS	
AI agents and LLM systems: Prompt design, RAG, tool/function calling, structured outputs, eval design, LLM-as-judge, guardrails, human escalation, Gemini/OpenAI usage.	
Backend and distributed systems: Java, Python, TypeScript/JavaScript, REST APIs, microservices, Redis, Kafka, SQL, NoSQL, high-throughput messaging, data pipelines.	
Production engineering: Observability, trace-driven debugging, latency tuning, back-pressure, graceful degradation, deployment planning, incident communication, reliability.	
Enterprise integration: API design, data mapping, auth constraints, partner onboarding, technical workshops, integration documentation, stakeholder alignment.	
Market and language: Vietnamese native, professional English, APAC/Vietnam digital platform and messaging ecosystem fluency.	
EDUCATION	
Bachelor's Degree in Software Engineering , FPT University - Ho Chi Minh City 70% merit scholarship. Capstone: traffic violation detection from surveillance cameras using computer vision.	Sep 2016 - Dec 2020
Gifted High School Diploma , Le Quy Don Gifted High School - Da Nang	Jun 2013 - May 2016
HONORS AND AWARDS	
VNG 1st Runner Up - MiniApp Building Hackathon.	
Zalo 2nd Runner Up Finalist - ZA Challenge.	
FPT Software Best BU Intern Performance @ FSG.	
FPT University Honorable Students Award.	
Silver Medal - April 30th Olympic for Gifted Students.	
First Prize - Software Programming Provincial Merit Competition.
