

Vinh Luu — Forward Deployed Engineer - Solutions Architect

E-mail: vinhluu.se@gmail.com * *Phone:* +84-795-795-595 * *LinkedIn:* connect

Summary

Solutions-oriented Engineer with 6+ years shipping ideas to value products. I sit between engineering, product, and enterprise partners — turning ambiguous business problems into deployed technical systems, and owning outcomes end-to-end. Deep experience in high-throughput conversational messaging, third-party integrations, and regulated enterprise workflows. Actively apply agentic workflows both inside my own delivery process and inside the products I ship, and I am drawn to roles where the job is not advice but working software running in a customer's production environment.

Work Experience

Zalo, VNG

Lead Software Engineer — Solutions Architect

Jul 2025 - Current

- **Enterprise Solutioning:** Serve as the technical counterpart for growing lifestyle verticals (JobMarket); run discovery with partner stakeholders, scope integrations, and design production architectures that hold up under real business load rather than pilot-mode traffic.
- **Deployment Ownership:** Delivered a system end-to-end — from ambiguous requirements gathered across Finance, Sales, and Ops, through architecture, implementation, and go-live — cutting operational overhead by 30% and unlocking auditable reporting.
- **Applied AI in Product:** Introduced AI workflows into internal operations and partner-facing surfaces (classification, content quality signals, and automated draft generation), with evaluation loops and guardrails to keep them safe in production.
- **Technical Leadership:** Managed team of engineers. Coaching style favors ownership over process — engineers who can walk into a partner room, scope the problem, and ship a fix.
- **Business Fluency:** Translate technical constraints into commercial language for Sales, Marketing, and Product; convert usage data into prioritization decisions that have shifted roadmaps and improved partner monetization.

Senior Software Engineer

Jul 2023 - Jul 2025

- **Conversational Systems at Scale:** Architected and deployed the messaging delivery pipeline behind Zalo's business messaging ecosystem — sub-second latency, millions of daily business-to-user messages, integrated with hundreds of enterprise partners on legacy and modern stacks.
- **Partner Integration:** Acted as the embedded technical partner for external enterprises adopting the ecosystem — API design, integration workshops, live troubleshooting — translating platform capability into workflows partners could actually put into production.
- **Production Reliability:** Owned performance tuning across 5+ core ecosystem apps; kept the platform stable through peak traffic events by treating observability, back-pressure, and graceful degradation as first-class engineering, not afterthoughts.

Software Engineer

Apr 2022 - Jul 2023

- **Trust & Safety Systems:** Led a critical message-quality initiative on Zalo Business Message, raising permission-control coverage by 50% for a 30M+ user surface — a direct precursor to the kind of guardrails enterprise-grade conversational AI requires today.
- **Infrastructure Migration:** Drove the end-to-end migration of legacy services to a modern microservices architecture; cut technical debt and improved resource efficiency by 25% without downtime.

Associate Software Engineer

Mar 2021 - Apr 2022

- **Requirements to System:** Converted raw user and business requirements into system flow charts and services; delivered a 15% business performance improvement through latency-focused redesigns using Redis, Kafka, and SQL/NoSQL stacks.

FPT Software

Software Engineer (Intern/Contract)

Sep 2019 - Aug 2020

- **Data Pipelines:** Built automated ETL pipelines that consolidated disparate data sources into actionable business intelligence for internal and partner-facing analytics.
- **Partner-Facing Documentation:** Authored integration guides for third-party portals, cutting onboarding time for external engineering teams.

Applied AI & Systems Highlights

AI in the loop: Practical, production-oriented use of LLMs — prompt design, structured outputs, tool/function calling, retrieval over enterprise knowledge.

AI-native engineering practice: Standardized use of AI tools across team workflows — from spec drafting and code generation to review and debugging — with clear guardrails on where humans stay in the loop.

Skills & Core Competencies

AI	Prompt engineering, tool/function calling
Solution Design	Discovery & Scoping, Architecture Strategy, System Performance, Business Mindset
Engineering	Systems Design, Algorithms, Software Development
Tech Stack	Java, Redis, Kafka, SQL / NoSQL, Microservices
Consulting	Problem-Solving, Stakeholder Management, Leadership, Communication

Education

Bachelor's degree in Software Engineering

Ho Chi Minh City, VN

FPT University

Sep 2016 - Dec 2020

70% merit scholarship covering 4 years of tuition and academic expenses.

Capstone: Detecting traffic violations from surveillance cameras using computer vision — one of my earliest applied-ML deployments.

Gifted High School Diploma

Da Nang, VN

Le Quy Don Gifted High School

June 2013 - May 2016

Silver medal, “April 30th Olympic” for Gifted Students, Southern Vietnam.

First Prize, Software Programming Provincial Merit Competition, Da Nang.

Honors and Awards

VNG	1st Runner Up — MiniApp Building Hackathon
Zalo	2nd Runner Up Finalist — ZA Challenge [8]
FPT Software	Best BU Intern Performance @ FSG
FPT University	FPT Honorable Students Award
