

Vinh Luu

Forward Deployed Engineer - Enterprise AI Agents & Integrations

Ho Chi Minh City, Vietnam · vinhluu.se@gmail.com · +84 795 795 595 · [linkedin.com/in/vinhluulinked](https://www.linkedin.com/in/vinhluulinked)

PROFILE

Forward-deployed, solutions-oriented engineer with 5+ years shipping production systems on Vietnam's largest messaging platform (30M+ users). Strong fit for enterprise AI agent deployment in APAC: high-throughput conversational infrastructure, partner-facing integrations, ambiguous workflow discovery, SOX-grade enterprise systems, and practical LLM automation with evals and guardrails. I own the path from customer problem to deployed software, production debugging, and measurable business impact.

Customer discovery
Partner workshops, scoping, stakeholder alignment, requirement decomposition.

AI deployment
LLM workflows, tool/function calling, structured outputs, eval loops, guardrails.

Integrations
APIs, messaging, data pipelines, auth, legacy systems, partner onboarding.

Production owner
Observability, latency, back-pressure, reliability, live issue debugging.

WORK EXPERIENCE

Zalo, VNG Vietnam's largest messaging platform - 30M+ users Mar 2021 - Current

Lead Software Engineer - Solutions Architect Jul 2025 - Current

- Enterprise solutioning:** Serve as technical counterpart for JobMarket and HealthTech verticals; run discovery with partner stakeholders, scope integrations, and turn open-ended business workflows into production architectures.
- Deployment ownership:** Delivered a SOX-compliant financial reporting and billing workflow end-to-end across Finance, Sales, Ops, and Product, reducing operational overhead by **30%** and enabling auditable reporting.
- Applied AI:** Introduced LLM-backed workflows for classification, content quality signals, and draft generation with structured outputs, eval loops, and human-in-the-loop guardrails for production use.
- Reusable delivery:** Built integration prototypes, partner blueprints, and technical docs that reduced onboarding time by **40%** and improved the feedback loop from external partners into Product and Engineering.
- Leadership:** Lead a team of 4 engineers, promoted 2 to senior, and standardize AI-assisted delivery workflows for spec drafting, prototyping, debugging, and review while keeping senior oversight on high-risk changes.

Senior Software Engineer - Technical Liaison Jul 2023 - Jul 2025

- Conversational systems at scale:** Architected and deployed the business messaging delivery pipeline behind millions of daily business-to-user messages with sub-second latency and hundreds of enterprise partner integrations.
- Partner integration:** Acted as embedded technical partner for external enterprises adopting the ecosystem: API design, integration workshops, live troubleshooting, and performance tuning across legacy and modern stacks.
- Production reliability:** Owned performance tuning across 5+ core ecosystem apps; improved peak-traffic stability through observability, back-pressure, and graceful degradation patterns.

Software Engineer Apr 2022 - Jul 2023

- Trust and safety guardrails:** Led message-quality and permission-control work on Zalo Business Message, raising coverage by **50%** on a 30M+ user surface.
- Infrastructure modernization:** Migrated legacy services to microservices, improving resource efficiency by **25%** without downtime.

Associate Software Engineer Mar 2021 - Apr 2022

- Requirement to system:** Converted raw user and business requirements into system flows and services; improved business performance by **15%** through latency-focused redesigns using Redis, Kafka, and SQL/NoSQL stacks.

- **Data pipelines:** Built automated ETL pipelines consolidating disparate data sources into business intelligence for internal and partner-facing analytics.
- **Partner-facing documentation:** Authored integration guides for third-party portals, reducing onboarding friction for external engineering teams.

SELECTED ROLE-RELEVANT PROJECTS

Solution Architect / Solutions Engineer portfolio systems: Built role-targeted portfolio projects for Google Ads Solution Architect, Customer Solutions Engineer, and Partner Solutions Engineer preparation. The systems package domain knowledge into advisory flows, diagnostic tooling, case-study libraries, and AI-assisted customer guidance - directly mirroring FDE work of learning a domain, building reusable frameworks, and making technical decisions legible to stakeholders.

AI-native engineering workflow: Standardized use of Claude, Cursor, and GitHub Copilot across delivery workflows with human review gates, faster spec-to-prototype cycles, and LLM-assisted code review/debugging. Practical focus: use AI to compress iteration time without outsourcing accountability.

FDE COMPETENCIES

AI agents	Prompt design, RAG, tool/function calling, structured outputs, LangGraph familiarity, evals, LLM-as-judge, guardrails, escalation design.
Systems	Distributed systems, high-throughput messaging, microservices, API design, Redis, Kafka, SQL/NoSQL, observability, reliability.
Integration	Enterprise APIs, data mapping, auth constraints, partner onboarding, technical workshops, integration documentation, live troubleshooting.
Customer	Discovery, scoping, stakeholder management, executive communication, ambiguity handling, business impact tracking.
Markets	Vietnamese native, English professional; APAC/Vietnam digital platform, messaging, commerce, and partner ecosystem fluency.

EDUCATION

Bachelor's degree in Software Engineering	Sep 2016 - Dec 2020
FPT University - Ho Chi Minh City 70% merit scholarship. Capstone: traffic violation detection from surveillance cameras using computer vision.	
Gifted High School Diploma	Jun 2013 - May 2016
Le Quy Don Gifted High School - Da Nang Silver medal, April 30th Olympic for Gifted Students. First Prize, Software Programming Provincial Merit Competition.	

HONORS AND AWARDS

VNG 1st Runner Up - MiniApp Building Hackathon Zalo 2nd Runner Up Finalist - ZA Challenge FPT Software Best BU Intern Performance @ FSG FPT University Honorable Students Award
